Summary

Junior web developer transitioning from a career in marketing and business development. Autodidactic learner with an insatiable appetite for new knowledge of programming languages in concert with knowledge of the industry as a whole.

Most Recent Projects

Members Portal
- Collaborated with two partners to develop a full-stack web application that connects chamber of commerce members to one another for the purpose of building relationships and developing local business.
- Uses the Laravel framework to handle the PHP backend, and SQL for all information displayed on the site.
- The application also incorporates Google Maps and Twitter APIs.

FlyPin
- Created a full-stack Pinterest clone that allows users to manage posts they create.
- Uses the Laravel framework for the PHP backend along with SQL, Bootstrap, and custom JavaScript.

Fantasy Costco eCommerce Site
- Developed an eCommerce website mirroring Costco Online; collaborated with two partners.
- Utilized vanilla PHP to handle both user and administrator sessions upon login.
- Built the site to allow administrators to manage ads and gave the users ability to create carts for purchasing.

Weather Checker
- A single-page application using Javascript React and Redux libraries to display forecast of a searched city.
- Utilized Redux-Promise to handle all Ajax request
